Efficiency and precision in your colour research!

The most important challenge in the *automotive* field is to obtain rapidly and with the maximum precision the exact colour identification of the car to repair.

Color Match is the new Lechler system of colour retrieval based on the Spectrophotometer with multi-corner reading and special Software that allows a precise and effective colour identification for difficult colours.

color match explorer®

The equipment is easily carried in a case: very light, sturdy and easy to transport.

Easy to use, it works with SW that can be updated through an Internet connection (<http://explorer.lechler.eu>). You will enrich your colour Data Base in an easy and rapid way directly from your PC.

**Color Match Explorer®
easy, efficient:
that is Lechler!**

color match explorer®

Color technology... at your service every time!

Color Match is your new assistant colourist. With some simple processes it is able to help you with extreme precision:

- Put the instrument on the substrate;
- It automatically reads the colour;
- It identifies immediately the best available formulation in the database;
- It corrects the colour you have applied to obtain a precise chromatic “matching” of the reference to be reproduced

The sophisticated Software of Color Match is innovative, and has been conceived in order to be used in an intuitive, easy and efficient way.

Place the spectrophotometer instrument on the surface you want to obtain the colour of and register the chromatic characteristics.

The special Lechler SW will identify the most precise HYDROFAN colour formulation in the PC Data Base.

After application, the colour should be correct and the formulation composition will be optimised.

The Hydrofan formulation will be sent to the Lechler Explorer® (Paint&Colour Management Software) for dosing and registration in a special file as a personal formulation.
